Chapter 1. FSC and PRS Support Escalation Procedure

Purpose

1. To define a process to Space plants to assess system issues for FSC and PRS.
2. To define a process for Space plants to escalate technical support for FSC and PRS **when needed**

Application

1. This process applies to all Space plants that have FSC and PRS technology. Licensee plants should contact their Space Global Technical Assistance Account Manager.
2. FSC and PRS are High Risk Systems obsolescence ranked – Unsupportable systems. The reason is that most (if not all) spare parts are not available for those systems. Plants must rely on in-house inventories, and because of the age of this equipment, in-house spare parts should not be considered a reliable solution.

References

- Forming Electronic Work Instructions are available on Book Space (GMF SharePoint Site) under Forming Electronics (FES).

Document Classification

- Asset Protection and Stability

Definitions

FSC: Forming Supervisory Computer

This is the main computer server for the forming electronic system for the Space IS Machines

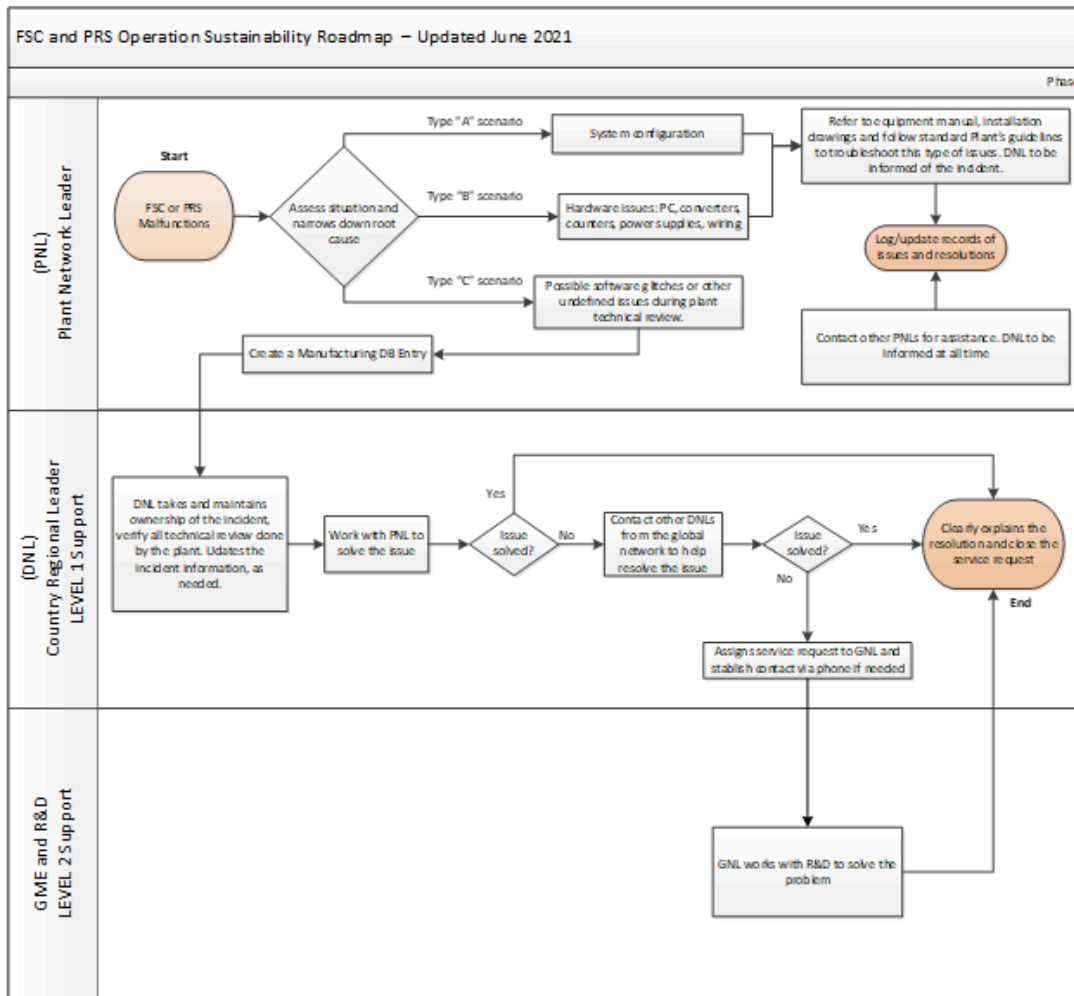

PRS: Production Recording System

This server is the one that consolidates the information from the cold end from Space inspection machines and losses

Procedure

1. System (PRS or FSC) issue has been assessed and reference material is used by PNL to go over first tier of the troubleshooting.
2. PNL uses the Manufacturing DB to initiate escalation process and involves Discipline Network Leader.
3. DNL takes and maintains ownership of the incident, verifies all technical review done by the plant. Updates the incident information, as needed.
4. DNL works with Global Network / other DNLs to brainstorm the issue.
5. DNL coordinates technical reviews with GNL and R&D until achieving final resolution.
6. DNL clearly explains the resolution and closes the service request.
7. A visual representation of this process can be found in the flowchart in the [Appendix \(on page 5\)](#)

Appendix – Flowchart showing the support escalation procedure for FSC and PRS.

Collaboration

Country Group	Role	Name
Americas North	Forming Electronics Specialist	Dan Knuckles
Europe	Forming Electronics Leader	Remko Beckers

Central Europe	Regional Leader Forming Electronics	Ruud Bormans
France - Spain	Jean-Pierre Locato	Jean-Pierre Locato
Latin America	IS Machine Leader	Miguel Morales
Engineering - Forming	Associate Engineer	Jose Gonzalez
Global	Global Forming Electronics Leader	Franklin Barrios

Revision History

2017-09-20	Originally Released as Process Control SOP-17-009
2022-05-09	Approved by Franklin Barrios, Global Leader FES Network. Moved to GMF Site as FES-02-100
